Valuation methodology

Company valuations are based on the following general valuation methods: Multiple-based models, peer-group comparisons, discount models, break-up value approaches, asset-based valuation methods as well as economic profit based models. Furthermore, recommendations are also based on the economic profit approach. Valuation models (including the underlying assumptions) are dependent on macroeconomic factors such as interest rates, exchange rates and raw material prices, and on assumptions about the economy. Furthermore, market sentiment affects the valuation of companies. The valuation is also based on expectations that might change rapidly and without notice, depending on developments specific to individual companies or industries. Our analysts' recommendations and target prices are derived from the models we use and might therefore change as a result of the use or development of different models. Our analysts' investment ratings generally relate to a 12-month horizon. They are, however, also subject to market conditions and can only represent a snapshot. The ratings may in fact be achieved more quickly or slowly than expected and therefore a rating may need to be revised upward or downward. Further information on the valuation methodology can be found under https://www.baaderbank.de/valuation_methodology.html.

Frequency of reports and updates

It is intended that each company with respect to which we issue a Research Document will be covered at least once a year, as well as in the event of important developments and/or changes in our recommendation.
